Some More Reasons to Love Astra

Besides design, speed and endless customizability, there are many reasons to consider Astra. Let's take a look at a few!

Accessibility Ready

Astra is accessible and follows WCAG 2.0 standards. It meets the AA level which is essential for usability.

Hooks & Filters

Developers will find Astra one of the best themes to work with for its clean and extendable code.

SEO Friendly Markup

Astra's codebase architecture follows best SEO practices. It even comes with the necessary Schema.org markup you need.

Translation & RTL Ready

You can translate Astra in your own language with .po & .mo files. You can even create multilingual websites.

Developed on Github

Astra is 100% open source and developed transparently on GitHub. Anyone can join the development and contribute.

Made for Page Builders

Astra is made to work with Page Builders like with Beaver Builder, Elementor, Site Origin, Visual Composer, Divi, etc.

Unparalleled Performance

Every single line of code in Astra is profiled for fast performing websites. We have numbers to prove that.

No jQuery

Many times, render blocking jQuery comes in the way of performance optimization. So Astra uses Vanilla JavaScript instead.

Less than 50 KB

Astra is feather light. It needs less than 50 KB of resources whereas most of the other WordPress themes require at least 300 KBs.

Just 0.5 seconds!

With default WordPress data, Astra loads in less than a half second. It is built for the speed and fully optimized for performance.
